Worldwide Distribution Network
At BST we understand what it means to have a global reach.
Our expanding worldwide network of distribution partners
means that BST products are currently available in 82
countries.

Working closely with our distribution partners means we can
identify product improvements and develop engineering
solutions, constantly evolving our product range and
improving our service.

2

About BST

BST Detectable products reduce the risk of foreign body contamination in hygiene critical environments, such as food and drink, pharmaceutical or cosmetic manufacturing plants.

Preventing foreign body contamination is at the frontline of food safety and detectable products manufactured by BST not only help towards this goal but also comply with international regulations and complement a company's HACCP systems.

BST are proud supporters of the Made In Britain campaign, with many BST products a result of strong partnerships with British manufacturers. In fact, over 85% of the detectable products in this brochure are manufactured right here in Great Britain by British Manufacturers.

With over 35 years experience in supplying the food industry, BST has grown into a global brand known for the quality of our products and the service we provide. BST launched our world famous DetectaPen® in 1994, and now supply over 1.8 million detectable pens per year, as well as supplying a wide range of other detectable products that reduce foreign body contamination risks to food processors across the globe.

Our ethos at BST is to build quality into every aspect of the business, from design and manufacture to logistics and support. Our highly experienced team places customer needs at the top of their priorities, whether that customer is a small artisan baker, or a global distributor. We not only supply a standard range of stocked detectable products, but we can also utilise our extensive British manufacturing partnerships to develop bespoke engineering solutions to suit our customers applications and needs.

Our manufacturing resources and product expertise combined with access to a range of food grade detectable plastics and rubbers means that we have the resources to see through the most intricate bespoke detectable product developments.

As BST has grown and evolved, we have improved our environmental policy to match our global reputation. We use recycled packaging for our distribution, have installed motion sensitive lighting in our modern warehouse facility, offer a pen recycling scheme, invested in eco friendly vehicles, and modified our production methods to be more energy efficient and lower our carbon footprint.

If you're looking for a supplier of detectable products that understands the importance of quality, safety, detectability, service and support then you need look no further than BST, the original pioneers and market leading supplier of metal detectable and x-ray visible products.

BST are proud to work in partnership with BRC global standards. Our products are intended to reduce foreign body contamination risks and improve food safety - they can help you with your BRC compliance. Quotes from BRC version 8 are referenced throughout this brochure for your convenience.

XDETECT®

Our flagship detectable plastic compound xdetect®, has benefited from over 28 years of technological refinement, making it one of the most advanced detectable compounds available on the market today. Xdetect® plastic contains a special formulation of additives that result in a unique set of properties, which strive to meet our objective of developing the world's ultimate food safe plastic. Our formulation of xdetect® is the most detectable, strong, and colourful compound we have ever made. It is also our most extensively tested compound with food contact approvals including FDA approved ingredients & full migration testing against EU and Japanese standards. With added antibacterial technology, this plastic is the science behind our world famous DetectaPen® range. BST products made from xdetect® benefit from the following properties:

☐ Electromagnetically Detectable

Xdetect® can be detected and rejected by industry standard in-line metal detection systems. It will even stick to a magnet, and has the same excellent material performance as regular polypropylene plastic.

☐ X-Ray Visible

Unlike many other detectable plastics, xdetect® contains an extra additive specifically designed for enhanced x-ray visibility. Customer feedback and independent testing has shown that our compound is highly visible in x-ray inspection applications.

☐ Shatter Resistant

Our compound is tough, designed to be shatterproof when exposed to harsh impacts, even in freezing conditions.

☐ Silver Ion Antibacterial/Antimicrobial Protection

As part of our ambition to achieve the ultimate in food safety, certain xdetect® products also incorporate silver ion antimicrobial technology. This technology is laboratory tested and proven to be effective against pathogenic germs and mould, including E Coli, MRSA and Salmonella. Antimicrobial protection is built into our DetectaPen® range as standard.

☐ Bright Colours for Visual Detection & Colour Co-ordination

Xdetect® is available in 9 bold and vibrant colours, making the plastic easy to spot as a foreign body with the added bonus of fitting into your production area colour co-ordination schemes.

☐ FDA & EU Food Contact Approval

Xdetect® contains only FDA approved ingredients, and is fully compliant with the latest EU food contact regulations, including full migration testing against EU migration limits set out in regulation 10/2011.

5
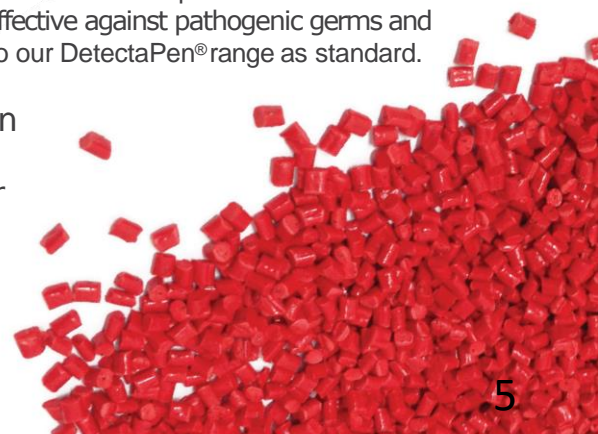

1 Stationery

With pens and stationary items the most common products in use in manufacturing areas, BST have a large range of products suitable for use in all environments. Our products are designed to be as environmentally friendly as possible.

The BST DetectaPen® has a long standing reputation as being the premier choice of factory writing equipment. Engineer, Brian S Teasdale, first invented the plastic detectable pen in 1994 and we've spent the last 28 years improving every aspect. This has resulted in what we believe to be the world's safest pen for use in food processing areas.

BRC Issue 8 Clause 4.9.6.2

"Pens used in open product areas shall be controlled to minimise the risk of physical contamination (e.g. designed without small parts and detectable by foreign-body detection equipment)."

BRC Issue 8 Clause 4.9.2.2

"Staples, paper clips and drawing pins shall not be used in open product areas."

BRC Issue 8 Clause 4.10.1.1

"A documented assessment in association with the HACCP study shall be carried out on each production process to identify the potential use of equipment to detect or remove foreign body contamination"

2 Food Preparation

BST Professional knives are made in Sheffield, England and feature fully hardened and tempered stainless steel (420H) blades. The xdetect® polypropylene co-polymer handles are metal detectable, x-ray visible, food grade and available in nine colours. Both the blade and the handle can withstand rigorous sterilising and dishwasher use, and do not represent the potential health hazards that are frequently associated with other knives.

If you can't find the knife you need, please call our office to discuss your requirements and we may be able to develop a bespoke solution for you.

PROCESSING TECHNOLOGY

DETECTA*BOX*®

The BST DetectaBox® is designed to address the problem of box fragments contaminating food products. This problem can occur whenever a food storage or handling box is subject to more wear and tear than usual and it is at risk of breaking or chipping.

The DetectaBox® is manufactured using XDETECT®, BST's flagship and industry renowned metal detectable and x-ray visible plastic. This plastic is designed entirely with food safety in mind. As well as being highly detectable it is also strong, hard-wearing, brightly coloured, chemical resistant, shatter resistant, FDA approved and EU compliant.

Vikan Range ~ Shadow Boards

Wall-mounted Shadow Boards

Shadow boards are an effective and affordable way to ensure GFSI-compliant "5S" storage of your hygienic cleaning tools. Colour-coded for hygienic segregation, these boards keep your tools organised, clean and in good condition – saving you time and money every day. They also make it easier to stay on top of inventories, and to keep the auditors satisfied.
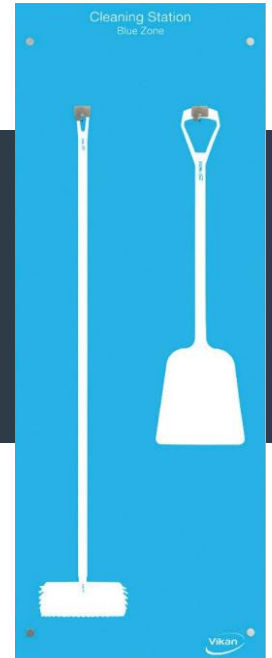

Code	Dimensions	Background

2111	2000 x 750mm	12 Colours
2112	2000 x 1150mm	12 Colours

Shadow Boards are a convenient and dependable way to get started with cleaning tool storage at your facility.

Made from high-quality materials, they are sturdy, attractive and fully customisable to your specific cleaning-tool inventory and colourcoding scheme.

For usage flexibility, we offer seven wall-mounted sizes and two (one or two-sided) mobile sizes.

BST Shovel Range

Our range of shovels are specifically developed for the food processing industry and use a specially formulated high impact, food grade polypropylene.

The strength of this shovel makes it virtually unbreakable, as well as being lightweight, easy to clean and store, offering excellent wear resistance, and reduces the risk of damage to floor surfaces and machinery.

BST Detectable Security Tags

These single use 'pull tight' security tags are sequentially numbered and ideal for sealing ingredient sacks, tote box lids, roll cages, marking assets, identifying keys and tracking products, as well as an infinite number of other traceability applications.

The tags tear off feature allows it to be removed without cutting tools, which enhances health and safety by removing the need for cutting tools, also eliminating the cost of such tools. The tags can be found on page 41.

5 PPE

Controlling hair contamination is a top hygiene priority for food producers and is a requirement according to BRC Issue 8 Clause 7.4.2. Hairnets and Mob 'Caps can accidentally or deliberately cause their own foreign body contamination by becoming a contaminant themselves!

Where detectable PPE is required, BSI have a full range of products to meet your requirements and protect your environment from potential contamination issues.

Our detectable head wear features either metal clasps or aluminium foil strips, both of which give highly strong metal detector readings, which subject to correct configuration will cause an automatic product rejection and/or alert the production team to the problem.

CONFORMS TO
BRC ISSUE 8
FOOD SAFETY

BRC Issue 8 Clause 7.4.2

Protective clothing shall be available that:

·Is provided in sufficient numbers for each employee.

· Is of suitable design to prevent contamination of the product (as a minimum containing no external pockets above the waist or sewn-on buttons).

· Fully contains all scalp hair to prevent product contamination.

·Includes snoods for beards and moustaches, where required, to prevent product contamination.

5 EASY STEPS

TO CORRECTLY WEAR YOUR HAIRNETS & BEARD SNOODS

3 Before donning the Hairnet, brush and tie the hair back. Make sure it's not tied too low down, as the Hairnet elastic needs to lay flat against the neckline.

1 Hold the Beard Snood with the closures east to west, holding the elastic in one hand and the body of the Beard Snood in the other. Locate the elastic to the back of the head and make sure the Beard Snood covers the nose.

4 With the closure north to south hold the Hairnet open ready for donning. Wearing it this way pulls the meshes closer together. Locate across the forehead and pull the Hairnet over the crown, ensuring all hair in the nape of the neck is covered. Locate under the ears, to keep the Hairnet securely in place.

2 Locate under the chin and ensure the elastic is over the ears. The Hairnet should not be put on first as the Beard Snood closures are covered by the Hairnet. This provides extra security and ensures the Beard Snood is kept in place.

5 Check all hair is fully enclosed, that the double elastic headband is laying flat and is located under the ears. If necessary get a colleague to double check. Put on other PPE after the Hairnet has been donned. This ensures that any hair dislodged by adjusting, isn't taken into the workplace.

6 First Aid

BST offer a selection of first aid kits and detectable plasters, ideal for food production environments. We offer the standard workplace BS-8599-1 first aid kit, as well as a catering first aid kit which includes detectable plasters and blue nitrile gloves.

BRC Issue 8 Clause 7.2.3

"All cuts and grazes on exposed skin shall be covered by an appropriately coloured plaster that is different from the product colour (preferably blue) and contains a metal detectable strip. These shall be site issued and monitored. Where appropriate, in addition to the plaster, a glove shall be worn"

7 Traceability

BST metal detectable loop tags are designed to address foreign body contamination concerns associated with regular paper traceability tags used in food processing environments. The heat resistant tags are metal detectable, self-locking, heat resistant to at least 250°C or dry oven heat and are available in two standard sizes with 8 standard colours.

The BST Tie ID Tags are suitable for a variety of applications including the tagging of machinery and other assets. As well as being metal detectable and x-ray visible, these tags are also highly shatter and snap resistant, making them less likely to cause contamination.

The BST single use 'pull tight' security tags are sequentially numbered and ideal for sealing ingredient sacks, tote box lids, roll cages, marking assets, identifying and tracking products, as well as an infinite number of other traceability applications. The tags tear off feature allows it to be removed without any cutting tools.

BST Bespoke Printed Loop Tags

BST have the capability to bespoke print onto detectable Labels, Loop Tags and Tape.

Our Standard and Heat Resistant Loop Tags can be supplied pre-printed with the standard print or we can print to your exact requirements.

We can include sequential numbering, barcodes, QR codes, your company name, logo, website and telephone number.

With no minimum orders you can have as little as one roll!

Please contact the sales team for further information.

8 Test Pieces

All our test pieces are calibrated and come with a certificate to BS EN ISO 9002 and UKAS standards. Every one of our test pieces are colour coded for visual verification and are engraved with a unique certificate number.

Our wide range of detector test pieces and x-ray test cards are available with various sizes and types of contaminant, to suit many applications.

Each certificate of conformity comes with details of material, size, grading, chemical and test data, hardness, density and contains a signature authenticating the certificate.

Regular performance testing of both metal detection and x-ray inspection equipment is an essential component of a Quality Control Management System.

BRC ISSUE 8
★ ★ ★
FOOD SAFETY

BRC Issue 8 Clause 4.10.3.4

Metal detector checking procedures shall be based on good practice and shall as a minimum include the following:

· Use of test pieces incorporating a sphere of metal of a known diameter selected on the basis of risk. The test pieces shall be marked with the size and type of test material contained.

· Tests carried out using separate test pieces containing ferrous metal, stainless steel and typically non-ferrous metal, unless the product is within a foil container where ferrous only may be applicable.

Bespoke test pieces, specifically designed for jars!

Can't find what you are looking for?

It's truly fascinating and also quite scary to see the range of foreign bodies that can find their way into food, even when it's subjected to minimal processing. As such, some customers sometimes wish to encapsulate and test against a wide range of contaminants including lead shot, metal nuts & bolts and even pieces of our own detectable plastics.

Customers sometimes require very specific shapes and sizes of test pieces to accommodate their production process. No matter how obscure your requirements, we pride ourselves on taking the time to offer customers a tailored product at a fair price. To discuss your needs, please call our sales team with as much requirement information as possible.

44

Bespoke Solution Services

Complimentary and obligation free, cost effective detectable solutions for your workplace? We can help you identify current and potential risks and help provide suitable cost effective solutions.

BST specialise in developing new products to address contamination risks. We can draw on an extensive network of specialised British manufacturers, many of whom we have formed close partnerships with over generations. We have at our disposal a wide range of detectable food safe materials, including variants of Polypropylene, Polyethylene, Polyurethane, Silicone, Nitrile, UHMWPE, PTFE, POM, PEEK, PBT, PPSU and PA6.

Examples of bespoke developments include pick and place suction cups, silicone extrusions, o-rings, gaskets and machinery parts.

Don't wait for an audit non-conformance or even worse a recall! Speak to BST and let us help you address the problem at its source. We would be pleased to visit you on site to help us gain a true understanding of your needs and deliver you the best solution.

NOVETAL *Industries*
PROCESSING TECHNOLOGY

9 Engineering

Vacuum depanner belts with silicone suction cups are widely used throughout the baking industry as a fast and effective method of extracting bakery products from oven pans on a moving conveyor belt.

The heat and speed of this process results in inevitable wear on silicone based suction cups. BST metal detectable silicone suction cups are designed to reduce the risk of silicone fragments contaminating food products during the depanning process. The cups contain an evenly dispersed metal detectable additive, making them detectable by correctly calibrated in line metal detection systems. Our food grade metal detectable and x-ray visible retaining clips are designed to securely fit our range of detectable suction cups onto bakery depanner belts.

LPS food grade lubrication with its DETEX® metal detectable caps and actuators makes an ideal lubricant range for food production environments. The aerosols use a CO_2 rather than liquid propellant, meaning you can utilise more product out of the can than most other brands which use liquid propellants.

BST Depanner Belts

BST have 30 years' experience in the supply of vacuum depanner belts, which are widely used throughout the baking industry.

Our food grade belts are three ply fabric backed with a smooth white PVC finish on the product facing side. These belts are strong, highly durable, chemical resistant and heat resistant to 110°C. Belts can be supplied pre-loaded with detectable retainers and suction cups or can be supplied blank.

We supply a wide range of detectable retaining clips to achieve varying reach and airflow, as well as a wide range of detectable cups to achieve various levels of flex and optimum suction on the product.

Please call +44(0)1302 775208 to discuss your requirements.

Materials

If you need materials for your own project we keep stock of a wide range of food grade detectable UHMW-PE, Silicone, Neoprene Fabric and Neoprene Rubber sheet materials, as well as detectable PPC, ABS, TPU, and HDPE compounds ready for injection moulding.

We have a selection of standard round, square and A-section extrusions in food contact approved metal detectable blue silicone. We also offer bespoke extrusions to fit your exact requirements, typical applications include door, lid and other mechanical seals.

We also stock detectable RJT O-Rings, Tri-Clamp Gaskets and DIN D-Rings (milk couplings) in most imperial sizes. We can also bespoke manufacture seals to your exact requirements from a range of detectable materials including Nitrile, Silicone, EPDM and FKM.

BST specialise in developing new products to address contamination risks. We can draw on an extensive network of specialised British manufacturers, many of whom we have formed close partnerships with over generations.

10 Antibacterial

SteriTouch® is the leading UK brand in antimicrobial technology, with a global presence in healthcare and consumer goods. When SteriTouch® additives are incorporated into a product, they offer continuous protection against cross infection and dramatically reduce the risk of the spread of pathogenic germs and moulds including E.coli, MRSA and Salmonella.

The SteriTouch® surface protection uses innovative antimicrobial technology that harnesses the natural sterilising properties of silver. This protection is permanently embedded into the pen and will not wear off over time.

Silver has been used for centuries for its natural sterilising properties. In recent years, this antimicrobial effect has been harnessed through the development of innovative carrier mechanisms, which enable the controlled release of silver ions, allowing silver to be incorporated into most materials without losing efficacy and without affecting the physical properties. The additives used, regardless of carrier mechanism, have comprehensive approvals, including those necessary for food contact applications.

Our antibacterial/antimicrobial product range is ideal for places of high risk cross infection such as hospitals, doctors, care homes, veterinary services, schools, banks, kitchens and reception areas.

SteriTouch® is a registered trademark of Radical Materials Ltd
